### WEBSITES, PORTFOLIOS, PROFILES

- <https://moredhanu.github.io/Dhanashree-Portfolio/>

---

### TECHNICAL SKILLS

Programming: Java

Core Concepts: Object-Oriented Programming (OOPs) – Inheritance, Polymorphism, Encapsulation, Collections Framework – List, Set, Map, Data Handling & Iteration

Web Technologies: HTML, CSS

Database: SQL (Oracle, MS SQL Server) – Query Writing, Data Retrieval, Data Validation

Backend & Integration: REST APIs – Request/Response Handling, Data Flow Integration

OS: Windows, Linux

Tools: JIRA

---

### EXPERIENCE

**Software Developer**, 11/2023 - 02/2026

**Surya Financial Technologies** – Bangalore

Worked on fintech applications, focusing on application logic and backend data processing.

- Applied core Java and OOPs concepts (inheritance, polymorphism, encapsulation) to understand and support business workflows.
- Utilized Collections Framework for efficient data handling and manipulation.
- Wrote optimized SQL queries for data retrieval, validation, and backend operations.

- Worked with REST APIs to handle request/response and ensure smooth data flow between systems.
- Collaborated with cross-functional teams to debug issues and improve application performance and stability.

---

## PROJECTS

---

### **BALM** – Banking Liquidity Risk Platform

Worked on banking application focusing on backend data processing and business logic validation.

Utilized Java and OOPs concepts to understand and support application workflows.

Applied Collections Framework (List, Map) for handling and processing data efficiently.

Wrote SQL queries for data retrieval, validation, and debugging.

Worked with REST APIs to handle request/response and ensure accurate data flow.

Collaborated with teams to identify issues and improve system performance and reliability.

### **OPSRISK**, *Banking*

Worked on operational risk management system focusing on backend data handling and workflows.

Used SQL queries for data verification, processing, and debugging.

Supported application logic validation and system flow understanding using Java concepts.

Worked with REST APIs to validate and manage data exchange between systems.

Collaborated with stakeholders to enhance system stability and performance.
